NEWS – New version of WD Fleet 3D application

In the next few days, we will be preparing a new version of WD Fleet 1.7.0 for the Play Store and our image tablets, where we have incorporated your additional requests and made corrections to improve the stability of the application. We've listed them for you here:

1. **APPLICATION LANGUAGE ON THE MAIN PANEL**

In response to numerous requests from companies that employ drivers from other countries, we have simplified the way of switching the language of the WD Fleet application and Sygic navigation and placed a flag symbol icon on the main top bar of the application.

Here, the driver can change the language of the application at any time.
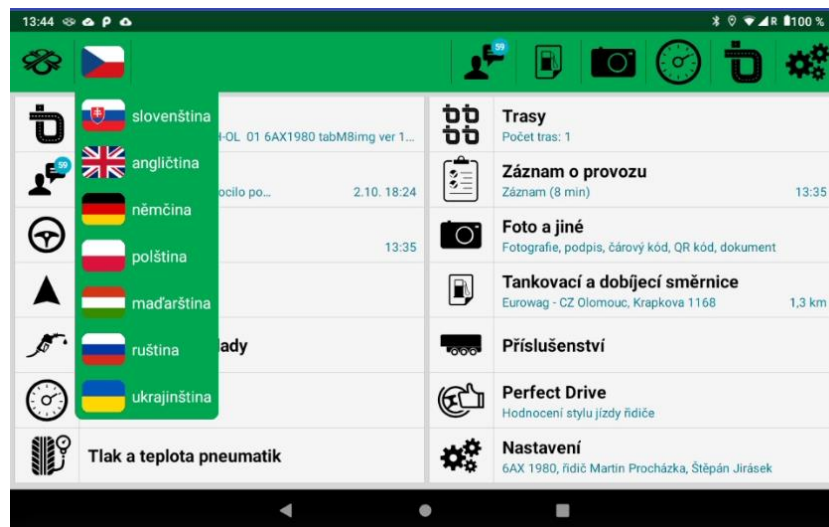

NEWS – New version of WD Fleet 3D application

After changing the language, both the language settings in the application and the language settings on the Terminal tab in Webdipecink are updated.
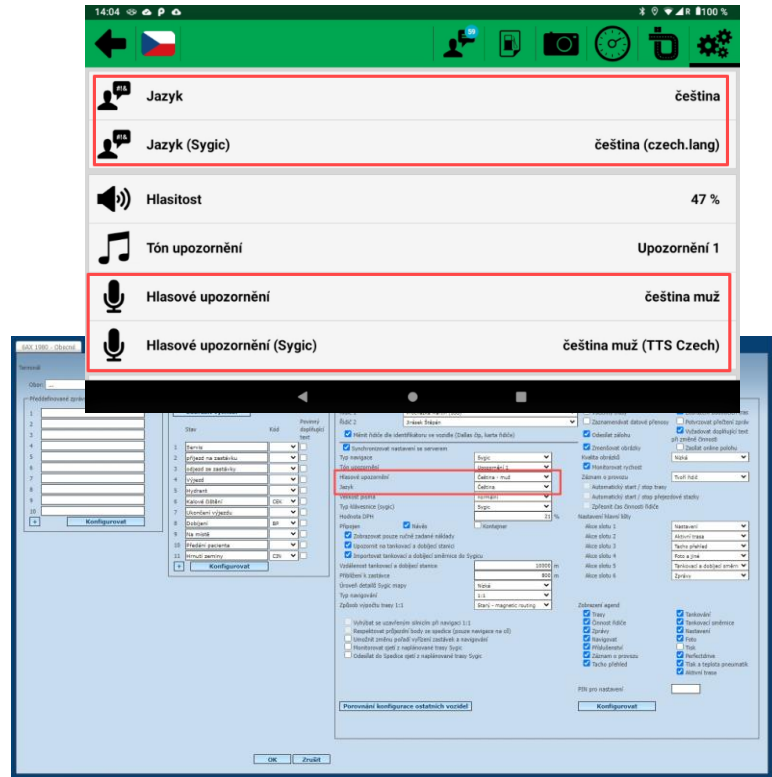

NEWS – New version of WD Fleet 3D application

2. CHANGE THE NAVIGA-TION METHOD IN CASE OF AN INCORRECT ROUTE CALCULATION

Maybe your drivers sometimes find that you planned and sent route from Webdispecink (or information system) to Sygic navigation, ends up "Route calculation error".

If it is not directly an error in the Sygic map documents (destination cannot be found) , the cause of the error may also be an incorrect setting of the route calculation method - Transfer route 1:1, Navigate through waypoints or Navigate only to destination.

Example:
The destination is entered correctly, but it is off the road and the navigation method is set to "Navigate to destination only".

NEWS – New version of WD Fleet 3D application

A new message will now be displayed where the driver can change the navigation method to a different one in our recommended order "Navigate through way-points", and we recommend informing the dispatcher about this fact.

If this method does not work either, the driver can change the navigation method to our last recommended order "Transfer route 1:1".

3. UPDATING MAP DOCU-MENTS

With our customers, we notice that the Sygic navigation maps are older, even from 2019. This results in route calculation errors (non-existent places and roads), navigation errors (vehicle dimensions affect the route calculation and there is no up-to-date information about bridges, underpasses, etc.).

Sygic updates the map documents every 3 months, i.e. in the 3rd, 6th, 9th, and 12th month - currently we have the map documents 9/2023.

The map documents have a size of about 12GB and therefore need to be updated via WIFI.

In cooperation with Sygic, we will regularly update the link for downloading Sygic map documents in the manual on our website under Support - Manuals - WD Fleet 3D - Guide for updating Sygic maps, where you can also find another possible procedure for updating map documents using USB OTG, which is significantly faster (about 10 min).

NEWS – New version of WD Fleet 3D application

**4. FURTHER MODIFI-
CATION**

- **Faster control when
changing activities -
now the activity list
closes the form after
changing an activity.
Previously, the list re-
mained open and
needed to be exited and
it was also possible to
click on multiple activi-
ties at the same time.**

- **Correction of offering
activities during semi
or automatic vehicle
operating record– it
used to happen that
when automatically
ending a crossing stop
with the current activity
"Safety break" and
starting a normal
transport specified by
the dispatcher, after the
first loading the empty
journey was set - now
the activity is offered
according to the valid
rules for the new
transport**

- **Integration of new
Sygic libraries 22.4.2**
- **Fixed loss of Sygic
voice navigation on
Lenovo TAB 4 tablet**
- **A number of modifica-
tions have been made
which increase the sta-
bility of using the appli-
cation.**

NEWS – EON cable for home charging

We have a great solution for home charging - the E.ON Drive Mobile Online Cable.

- **Power up to 22kW**
- **Connectivity from the E.ON Drive system to the Web-dispecink system**
- **Changeable end connectors - 400V/16A, 400V/32A, 230V/16A, Type 2**
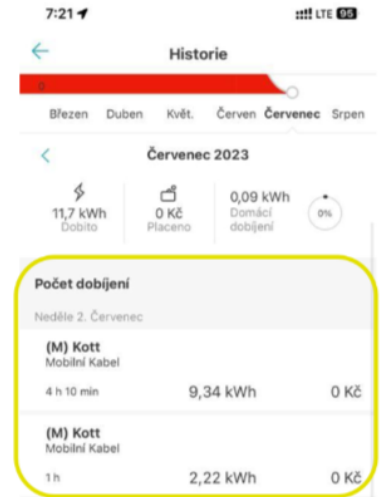

NEWS – EON cable for home charging

With the new E.ON Drive Mobile Online Cable, your home charging is also automatically entered directly into the costs in Webdispecink.

A week with ID.BUZZ

We had the opportunity to become a part of modern electromobility with a borrowed pure electric vehicle ID.BUZZ from Volkswagen.

We got comfortably out of the city, but also into the very center of Prague. Thanks to the great charging power, we managed to charge the battery to 80% in 25 minutes and understood the essence of electromobility.

END

We hope that you have found useful information in the articles in this issue of the magazine that will make working with your fleet even easier.

Thank you for your trust.
